

EAZY MMBD

Product Code:	1201	Packaging:	25L
Product Group:	Water Treatment	Issue/Date:	1.40 - 31/07/2015

eazy MMBD is liquid seawater dispersant to prevent marine growth adhering to surfaces in seawater cooling systems.

It will keep the system free from microbiological and macro biological growth thus ensuring that the cooling capacity operates at maximum efficiency.

Application and use

As this product is a marine growth preventative, it is essential that the cooling system be cleaned prior to the beginning of any treatment program. For advice please contact Eazychem.

N.B. This product will disperse new growth but not existing growth.

Product should be dosed to the seawater cooling systems on a regular basis in order to maintain optimal heat transfer condition and system cooling capacity.

Directions for use

Product should be mixed at a rate of 0.5 liters per 100 tonnes of water flow and fed by means of a gravity tank and flow meter or eductor unit, to the external sea chest, for a period of one hour. The dosage frequency will be dictated by the trading conditions.

Vessels which operate continuously in coastal waters should dose every three days. Vessels which are ocean going should dose once per week and every two days when in coastal waters.

Health and Safety

Please refer to the Material Safety Data Sheet and Product Label for specific information.

Limitation of Liability

Eazychem's standard **terms and conditions** of sale, available on request, apply and contain limitations on any liability that may be incurred by Eazychem arising in any way from the sale and use of products supplied by Eazychem.
